Multivariate Time-Series Prediction Using Deep Learning

Name - Manith Ratnayake
Date - 2026/11/09

Table of Contents

1. Introduction

1.1 Problem Overview

1.2 Project Objectives

Data Insights

2.1 Dataset Overview

2.2 Exploratory Data Analysis

2.3 Key Findings

Data Preprocessing

3.1 Missing Value Analysis

3.2 Outlier Detection and Treatment

3.3 Data Scaling and Normalization

3.4 Data Splitting

Feature Engineering

4.1 Time-Based Features

4.2 Rolling Window Features

4.3 Lagged Features

4.4 Interaction Features

4.5 Domain-Specific Features (if applicable)

4.6 Feature Selection

Model Design

1. Baseline Models:
2. Deep Learning Model Design:
3. Activation Functions and Optimizers:
4. Loss Functions:
5. Model Complexity and Regularization:

6. Model Training and Evaluation

1. Training:

2. Evaluation Metrics:

3. Performance Assessment:

4. Visualization:

7. Model Optimization

7.1 Hyperparameter Tuning

7.2 Regularization Experiments

7.3 Early Stopping

7.4 Optimization Outcomes

Results and Discussion

8.1 Model Performance Comparison

8.2 Predicted vs. Actual Values

8.3 Residual and Error Analysis

8.4 Discussion of Findings

Challenges and Solutions

Conclusion

References
